

A rapid identification of anthocyanins in various plants from Burkina Faso by HPTLC/MS

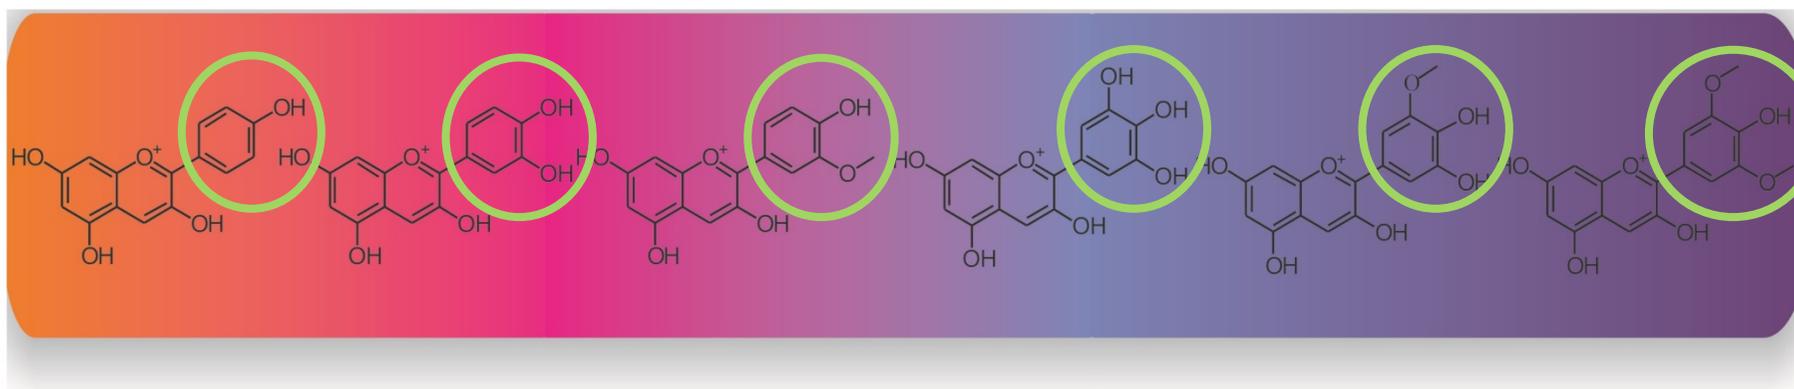

Presented by
Rosella SPINA

Background- Anthocyanidins chemistry

Anthocyanidins
R-groups: -H, -OH and / or -OCH₃

Pelargonidin

Cyanidin

Peonidin

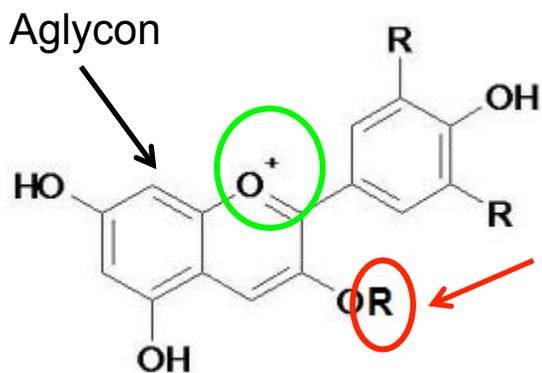

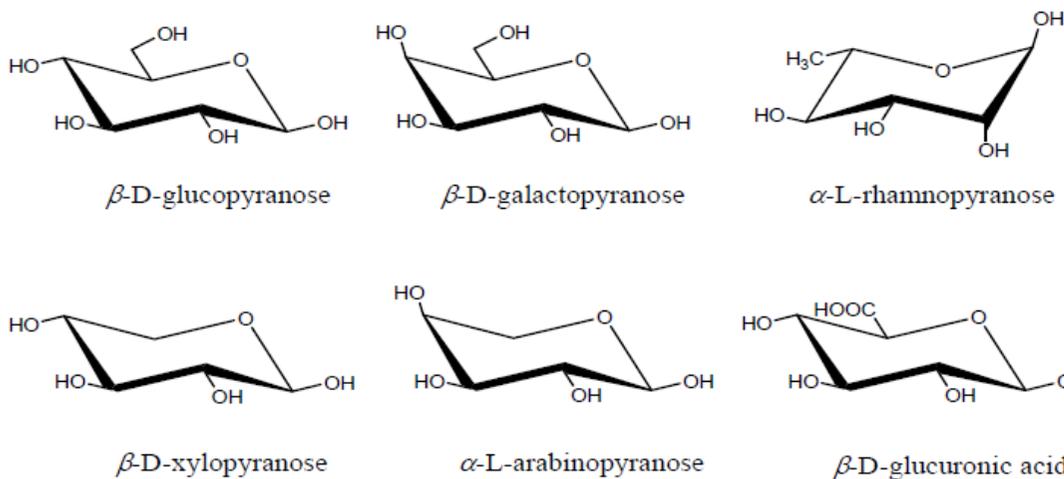

Delphinidin

Petunidin

Malvidin

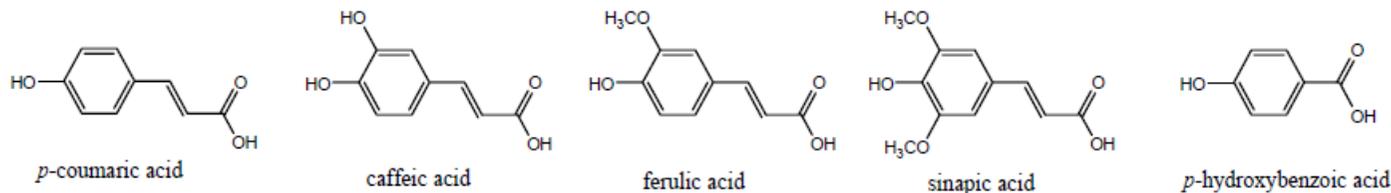

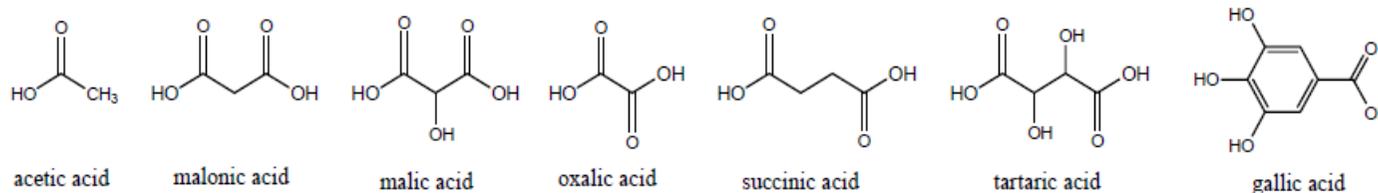

> 300 structurally different anthocyanins

Sugars

Acyl moiety

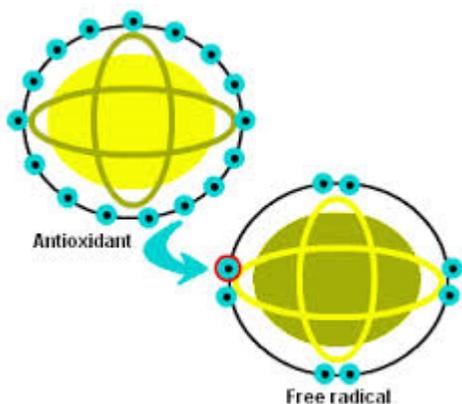

2-Phenylbenzopyrylium cation

Are used as a food-colorant

E163

Have antioxidant properties

Potential therapeutic role to:

- Cardiovascular diseases
- Cancer
- Inhibition of several virus
- Improvement of visual acuity

Burkina Faso's plants studied

HPTLC separation conditions

for qualitative and quantitative analysis of anthocyanins

Tapinanthus dodoneifolius
Loranthaceae
Flowers

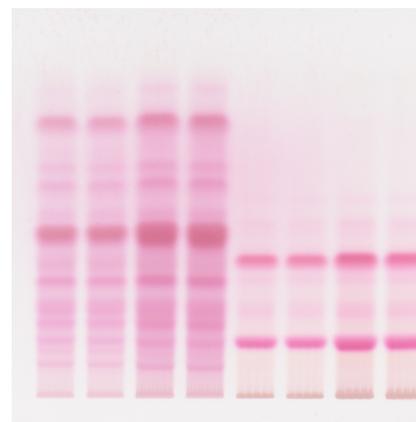

Burkina Faso

Eichhornia crassipes
Pontederiaceae
Flowers

Screening stationary and mobil phase

HPTLC plate silica gel 60 F₂₅₄

Different solvents systems:

-) *n*-Butanol-acetic acid-water 40-10-20 v/v
-) Ethyl acetate-isopropanol-water 65-25-10 v/v
-) Ethyl acetate-toluene-water-formic acid 10-3-0.8-1.1 v/v
-) Ethyl acetate-butanone-water-formic acid 7-3-0.8-1.2 v/v
-) Ethyl acetate-acetic acid-formic acid, water 110-11-11-25 v/v

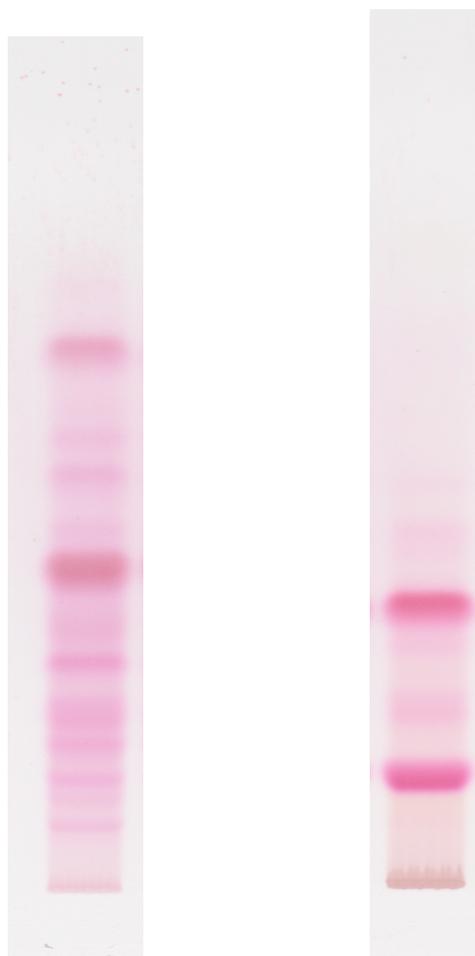

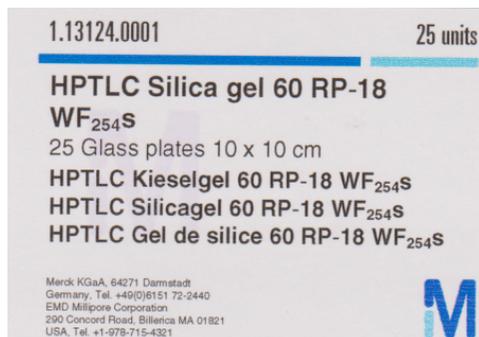

HPTLC plates RP-18 WF_{254S}

Different solvents systems:

-) Methanol-water- formic acid 40-60-2 v/v
-) Methanol-water-TFA 55-45-1 v/v
-) Methanol-water-TFA 40-60-5 v/v
-) Ethanol-water-TFA 20/80/2 v/v
-) Acetonitrile-water-TFA 20-80-2 v/v

LINOMAT 5

*Eichhornia
crassipes*

*Tapinanthus
dodoneifolius*

HPTLC plates
RP-18 WF_{254S}

Acetonitrile-water-TFA
20-80-2 (v/v)

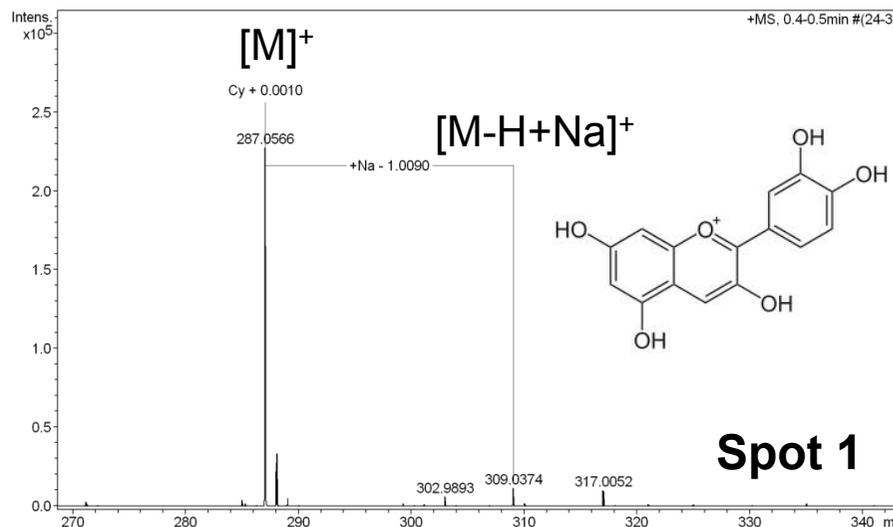

Results by HPTLC/MS from crude extract of *Tapinanthus dodoneifolius*

Tapinanthus dodoneifolius
Loranthaceae
Flowers

Sample	Compound	nm	ng/spot	r	sdv %
<i>Tapinanthus dodoneifolius</i>	Cyanidin	530	1918	0.99782	2.06
<i>Eichhornia crassipes</i>	Cyanidin	530	736.25	0.99782	2.06
<i>Tapinanthus dodoneifolius</i>	Cyanidin-3-glucoside	530	1896	0.99741	2.94
<i>Eichhornia crassipes</i>	Pelargonidin	510	605.25	0.99739	1.33
<i>Eichhornia crassipes</i>	Pelargonidin-3-glucoside	520	840.87	0.99853	1.57
<i>Eichhornia crassipes</i>	Delphinidin	555	1109	0.99292	6.33
<i>Eichhornia crassipes</i>	Delphinidin-3-glucoside	555	1712	0.99800	3.79
<i>Eichhornia crassipes</i>	Delphinidin-3,5-diglucoside	530	1816	0.99917	1.08

Correlation coefficient > 0.99

Regression via height: polynomial;

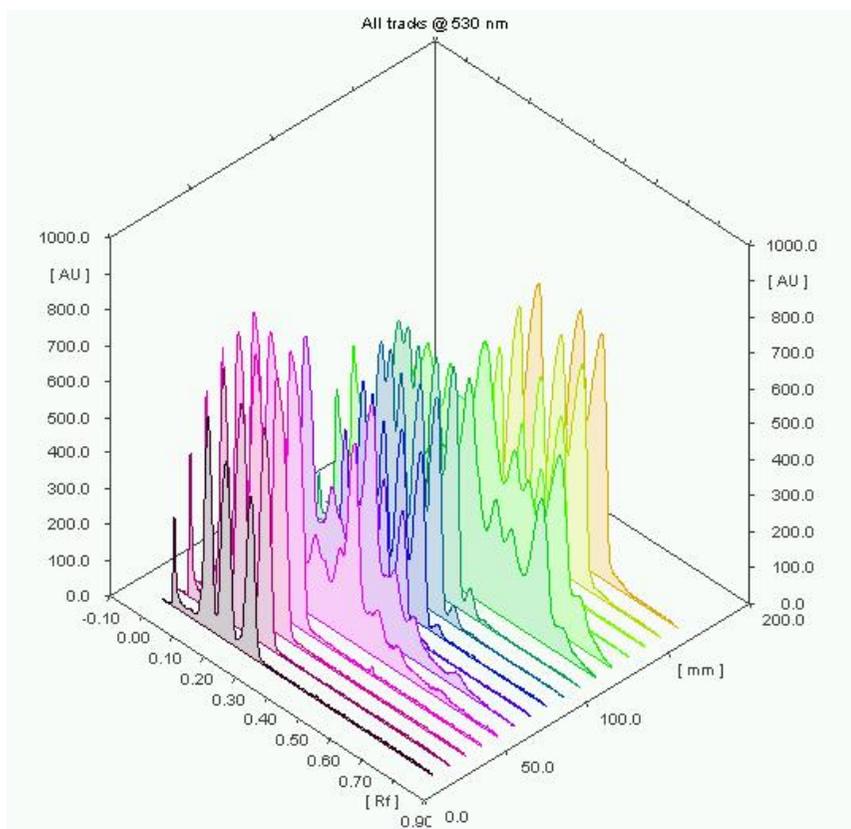

Volume applied of samples 10 μ L;

Concentration of solutions of crude extract: 5 mg/0,5 mL in MeOH

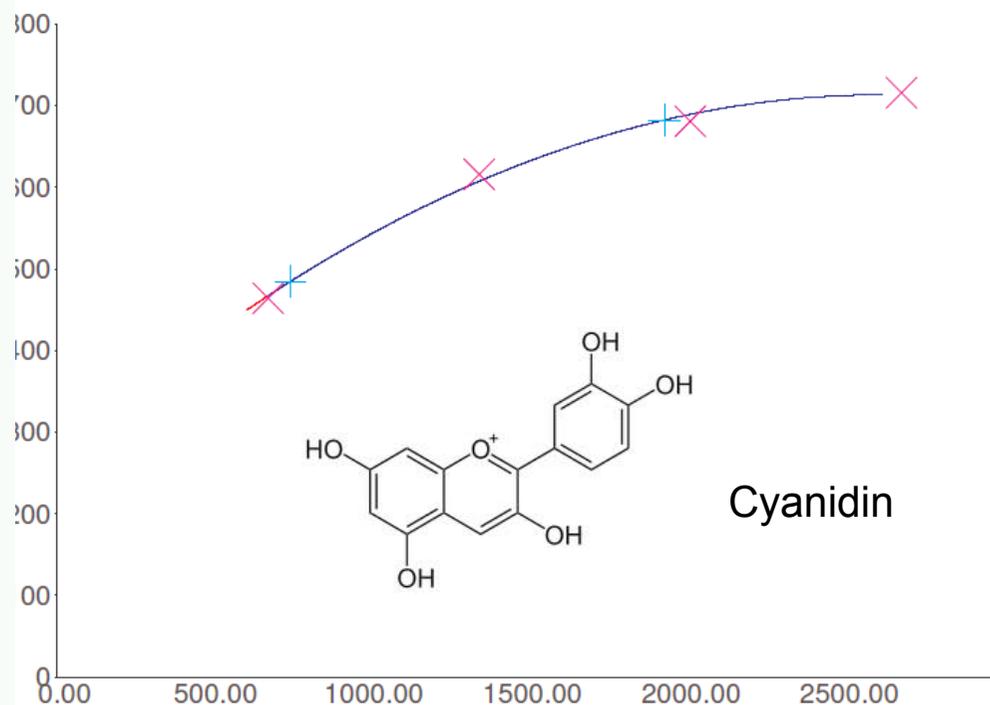

Substance: cyan @ 530 nm

Regression via height: Polynomial $Y = 268.3 + 0.3419 * X + -6.569e-005 * X^2$

$r = 0.99782$ $sdv = 2.06$

HPTLC 3D-densitogram of absorbance measurement at 530nm for all tracks

Polynomial calibration of cyanidin via peak height by absorption at 530 nm

Conclusion

Methanolic extract
